HENRY HUDSON, BOLD NAVIGATOR OF THE ARCTIC

By CLAUDE H. VAN TYNE, Professor of American History at the University of Michigan.

An authoritative Article, Which Brings Out Vividly Why All Ameriicans Love to Honor One of the Men Whose Great Achievements Will Be Recalled in Pageantry in New York's Hudson-Fulton Celebration This Week.

On another strange shore "Wee saw nany scales, and two fishes which we indired to be sea-horses or Morses.' Again, the chronicler writes. Beares had been heart, as we saw by their footing and dung upon the fee, and many cert sick with the eating of beares fiesh goodfed. Later a bear approached them an "many Bands of floating ice" until scandy abound. "But when she saw us been at her she cast her head between her had logges, and then dived under the loc."

Mermaid the Crew Saw.

In one of his voyages Hudson and her true door he sea-horses (Walfrases), their addresses, being addresses, their addresses, being addresses, being addresses, being addresses, being addresses, being addresses while sobservations confined to the inhosting one of our companie looking observations of the companie looking observation and walfrases, for he is the use of a because were like a woman's, tas they say that saw her her been and overturned her, from the Navil upward her back's and breasts were like a woman's, tas they say that saw her her been and overturned her, from the Navil upward her back's and breasts were like a woman's, tas they say that saw her her been and the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the foot notes, can you doubt the truth of the goests might enjoy themselves. The eight wise men who run the scientific affairs of the government, is Dr. Lehand Ossian Howard. When, a dozen vears ago, he was made chief of the division of entomology, in the department of agriculture, it was a comparatory and a comparatory of agriculture, it was a comparatory and the summar of agriculture, it was a comparatory and the summar of agriculture, it was a comparatory and the summar of agriculture, it was a comparatory and the summar of agriculture, it was a comparatory and the summar of agriculture, it was a comparatory and it was a comparatory of the summar of the country hundred of millions of dollars annually. But the most promising of its activities, so far as the future is conserved, is the introduction of friendly bugs to light the inpurious insects which are such destructive enemies of the crops.

Apart from this business of introducing beneficial bugs, which Dr. Howard has himself been foremost in developing, the most important work he has undertaken has had to do with mesquitoes and houselies, or "typhoid dies," as he calls them. Not only his he contributed much to present knowl these insects, but he has led, and is still leading, the crusade for their extermination.

A Sprained Ankle.

As usually treated a sprained ankle will disable the injured person for a month or more, but by applying Chamberlain's Liniment and observing the directions with each bottle faithfully, a cure may, in most cases, be effected in less than one week's time. This liniment is a most remarkable preparation try it for a sprain or a bruise, or when the problem in the pro

hastened their reports to the Dutch East india company.

The fact that Hudson was not re-employed by the company indicates that they were at first disappointed with the results of his cruise. They had wished a route to China which they might monopolite, but Hudson had only explored a new American river. However, they soon established a trading post at the month of the mighty stream and at last came to see, no doubt that ten years of New York and the for trade was better than a cycle of Cathay.

Hudson's Dramatic End.

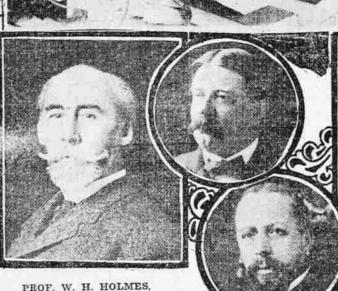

sometimes the marvel was not so great. Sometimes the marvel was not so great but was none the less worth telling. This night our cut ran crying from one side of the ship to the other looking overloard, which made us wonder, but we saw nothing. No doubt so simple a fact was a sign and a wonder to the supersitious mariners of the 15th century.

There were times when Hudson and his men were hard pressed, as when the last fowl was in the "steep-tuh," and every man regarded a pound of candles as a great dainty. But relief came, for with that egotistical plety of the 16th and 17th century he writes: "Almighty God, who never suffereth his elect to perish, sent us on the 18th of Fobruary the ordinary breeze," and they were able to escape starvation, and after a "prettie gale," they came upon "the Mount of God's Mervie."

od's Mercie.

Hudson's Drematic End.
Once again did Hudson venture to sell into the Arctic regions to try 'If through siny of the passages which Davis saw, any massage might or found to the other ocean called the South Sea.

The traile ending of this voyage is the most commonly known event of Hudson's life after the discovery of the Hudson's life after the discovery of the Hudson's rever. Amid the lee of Hudson's bay the crew became mutinous, and placed Hudson and a few loyal companious in a small aballon with a wholly inadequate supply of food, and set them adrift among the fee floor where without doubt they perished miscrably.

Thus, in dramatic mystery, ended the life of one of the boldest explore, who ever challenged the terrors of the "thrilling regions of the thick-ribbed ice."
